Step 1. Choose the field type Step 1

Specify the type of information that the custom field will contain.

Data Type

None Selected Select one of the data types below.

Auto Number A system-generated sequence number that uses a display format you define. The number is automatically incremented for each new record.

Formula A read-only field that derives its value from a formula expression you define. The formula field is updated when any of the source fields change.

Roll-Up Summary A read-only field that displays the sum, minimum, or maximum value of a field in a related list or the record count of all records listed in a related list.

Lookup Relationship Creates a relationship that links this object to another object. The relationship field allows users to click on a lookup icon to select a value from a popup list. The other object is the source of the values in the list.

Master-Detail Relationship Creates a special type of parent-child relationship between this object (the child, or "detail") and another object (the parent, or "master") where:

- The relationship field is required on all detail records.
- The ownership and sharing of a detail record are determined by the master record.
- When a user deletes the master record, all detail records are deleted.
- You can create rollup summary fields on the master record to summarize the detail records.

The relationship field allows users to click on a lookup icon to select a value from a popup list. The

External Lookup Relationship

You can create lookup summary fields on the master record to summarize the detail records. The relationship field allows users to click on a lookup icon to select a value from a popup list. The master object is the source of the values in the list.

Creates a relationship that links this object to an external object whose data is stored outside the Salesforce org.

Checkbox

Allows users to select a True (checked) or False (unchecked) value.

Currency

Allows users to enter a dollar or other currency amount and automatically formats the field as a currency amount. This can be useful if you export data to Excel or another spreadsheet.

Date

Allows users to enter a date or pick a date from a popup calendar.

Date/Time

Allows users to enter a date and time, or pick a date from a popup calendar. When users click a date in the pop-up, that date and the current time are entered into the Date/Time field.

Email

Allows users to enter an email address, which is validated to ensure proper format. If this field is specified for a contact or lead, users can choose the address when clicking Send an Email. Note that custom email addresses cannot be used for mass emails.

Geolocation

Allows users to define locations. Includes latitude and longitude components, and can be used to calculate distance.

Number

Allows users to enter any number. Leading zeros are removed.

Percent

Allows users to enter a percentage number, for example, '10' and automatically adds the percent sign to the number.

Phone

Allows users to enter any phone number. Automatically formats it as a phone number.

Picklist

Allows users to select a value from a list you define.

Picklist (Multi-Select)

Allows users to select multiple values from a list you define.

Text

Allows users to enter any combination of letters and numbers.

Text Area

Allows users to enter up to 255 characters on separate lines.

Text Area (Long)

Allows users to enter up to 131,072 characters on separate lines.

Text Area (Rich)

Allows users to enter formatted text, add images and links. Up to 131,072 characters on separate lines.

Text (Encrypted) *i*

Allows users to enter any combination of letters and numbers and store them in encrypted form.

The Object Name is used when referencing the object via the API.

Object Name Reschedule_Cancel Example: Account

This screenshot shows the Salesforce Setup interface for creating a new custom object. The main title is 'New Custom Object'. A message at the top states: 'Permissions for this object are disabled for all profiles by default. You can enable object permissions in permission sets or by editing custom profiles.' Below this, there are sections for 'Custom Object Definition' and 'Custom Object Information'. In the 'Custom Object Information' section, the 'Label' is set to 'Reschedule/Cancel' and the 'Plural Label' is set to 'Reschedule/Cancels'. There is also a checkbox for 'Starts with vowel sound'. At the bottom, it says 'The Object Name is used when referencing the object via the API.' and shows the 'Object Name' as 'Reschedule_Cancel'. The overall theme is the transition to Lightning Experience, with a prominent banner at the top encouraging users to move to it for a productivity boost.

Custom Object Information

The singular and plural labels are used in tabs, page layouts, and reports.

Label Example: Account

Plural Label Example: Accounts

Starts with vowel sound

The Object Name is used when referencing the object via the API.

Object Name Example: Account

Description

Context-Sensitive Help Setting Open the standard Salesforce.com Help & Training window Open a window using a Visualforce page

Content Name

Visa slot | Salesforce Object Manager | Salesforce New Custom Object ~ Salesforce

arignarannagovernmentart110-dev-ed.develop.my.salesforce.com/01l/e?appLayout=setup&noS1Redi...

Name

Enter Record Name Label and Format

The Record Name appears in page layouts, key lists, related lists, lookups, and search results. For example, the Record Name for Account is "Account Name" and for Case it is "Case Number". Note that the Record Name field is always called "Name" when referenced via the API.

Record Name Example: Account Name

Step 1. Choose the field type Step 1

Specify the type of information that the custom field will contain.

Data Type

None Selected Select one of the data types below.

Auto Number A system-generated sequence number that uses a display format you define. The number is automatically incremented for each new record.

Formula A read-only field that derives its value from a formula expression you define. The formula field is updated when any of the source fields change.

Roll-Up Summary A read-only field that displays the sum, minimum, or maximum value of a field in a related list or the record count of all records listed in a related list.

Lookup Relationship Creates a relationship that links this object to another object. The relationship field allows users to click on a lookup icon to select a value from a popup list. The other object is the source of the values in the list.

Master-Detail Relationship Creates a special type of parent-child relationship between this object (the child, or "detail") and another object (the parent, or "master") where:

- The relationship field is required on all detail records.
- The ownership and sharing of a detail record are determined by the master record.
- When a user deletes the master record, all detail records are deleted.
- You can create rollup summary fields on the master record to summarize the detail records.

The relationship field allows users to click on a lookup icon to select a value from a popup list. The master object is the source of the values in the list.

External Lookup Relationship Creates a relationship that links this object to an external object whose data is stored outside the Salesforce org.

Checkbox Allows users to select a True (checked) or False (unchecked) value.

User and Group Sharing Help

Type	Name ↑	User Access	Reason
No records to display.			

Explanation of Access Levels

- Full Access - User can view, edit, delete, and transfer the record. User can also extend sharing access to other users.
- Read/Write - User can view and edit the record, and add associated records, notes, and attachments to it.
- Read Only - User can view the record, and add associated records to it. They cannot edit the record or add notes or attachments.
- Private - User cannot access the record in any way.
